

brnccolor Charger

We are delighted that you have chosen a high quality brnccolor product.

The charger allows charging of all obtainable NC accumulators, which fit into the IRX transmitter.

Operating Instructions

Connect the charger with its mains cable to the power source. The green control indicator (2) will light up. Push the IRX transmitter from below onto the socket (3). Now the red charging lamp (1) lights up. Charging with the enclosed 900mAh accumulators takes about 3 hours. As soon as the battery is fully charged, the charging indicator (1) extinguishes.

Notice particularly

Only accumulators of the same type and of the same manufacturer should be used. In addition the accumulators must have the same charging condition.

Attention

Only use with IRX transmitter as from the series 0496. The sticker with the serial number can be found in the housing. Additionally a red point is fixed on the outside of the socket. Only use in dry conditions. Do not use within the reach of children. Only use for charging NiCd accumulators. Charging other batteries or accumulators could cause injuries and damage.
